

CVI v3 tutorial

CVI is happy to present- CVI v3:

and its new features, including our new innovative liquidity vault: the Theta Vault, which allows a sustainable and scalable source of liquidity for the CVI volatility tokens on any secondary market and decentralized exchange. This major scalability improvement allows shipping one of the flagship products of the CVI ecosystem - the “Volatility tokens” which have been the early vision of the platform since its inception. In comparison with previous versions which were targeted toward early adopters, the new v3 is a complete and mature version of the ecosystem.

In this short tutorial, we will walk you through, in a few easy steps on how to use CVI’s new platform. You can follow the step-by-step guide below to understand the process of minting and burning CVOL tokens, as well as withdrawing and depositing to the Theta vaults.

CVOL

Similar to VIX ETFs, CVOL is a token that is designed to track the intraday movement of the CVI. The CVOL token aims to allow market participants to instantly gain exposure to crypto volatility without incurring additional costs.

The CVOL is an elastic token that provides instant access to certain fluctuations in the crypto market volatility. When minting/burning(Platform) or swapping(DEX) CVOL there are a few parameters that need to be considered:

1. Collateral ratio- This is the ratio between the potential maximum value of the volatility tokens in circulation to the combined value of the volatility tokens and the Theta vault liquidity
2. Funding fee- This is the fee paid over time by CVOL token holders until their volatility tokens are sold/burnt, it is vital to note that the funding fee is not constant and may change based on the value of the CVI and the collateral ratio of the corresponding volatility token.
3. Platform price vs The price on SushiSwap- CVOL platform price is pegged to the CVI index, thus, every time the CVI moves or there is a change in the CVOL price on DEX there is an arbitrage opportunity.

Users can do the following on the CVI V3 Platform:

1. Mint/Burn CVOL tokens on the platform
2. Swap to/from CVOL tokens on the DEX
3. Deposit/Withdraw liquidity to/from the Theta vault

Minting CVOL tokens

Step 1- Select token(This is the beta version, thus, only CVOL is available)

APPROVE USDC

Step 2- Enter the amount of USDC you want to spend or click on “**Max**” to swap the whole amount in your wallet’s balance.

- The maximum amount of CVOL that can be minted depends on the collateral ratio since each volatility token potential gains must be covered by Theta vault liquidity.

Step 3- Adjust the “Receive in” slider to the target time- The “Receive in time” is the time it will take for your request to be fulfilled. By default, the request will be fulfilled automatically by Chainlink keepers, and the target time is set by default to 60 minutes. But if you want your request to be fulfilled sooner, you can adjust the slider backwards to your preferred time. This, however, will attract an additional fee (Expedite fee)

The screenshot shows a horizontal slider interface for setting a 'Receive in' time. The slider is set to 40 minutes. The interface includes a question mark icon, a '40Min' label at the right end, and numerical markers at 20, 40, and 60.

Net mint amount: This refers to the total amount of USDC that will be used to mint CVOL tokens after the deduction of all relevant fees.

Expected number of tokens: This refers to the number of tokens the user will receive upon the fulfillment of their request. This amount is subject to the movement of the CVI and the fees the user is required to pay

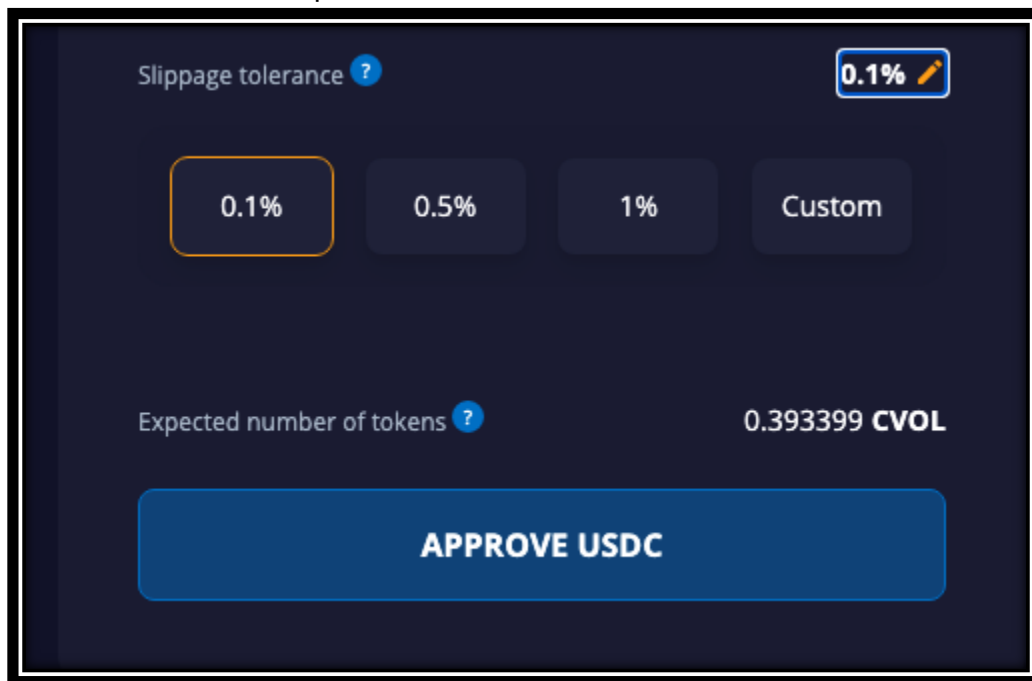

The screenshot shows a form titled 'Enter Amount' with a text input field containing '1,000'. To the right of the input are 'Max' and 'USDC' buttons. Below the input, it says 'Your available balance: 100,000 USDC'. Further down is a 'Receive in' slider set to 60 minutes, with markers at 20, 40, and 60. At the bottom, there are three rows of summary information: 'Net mint amount' is 996.9 USDC, 'Slippage tolerance' is 0.1% with an edit icon, and 'Expected number of tokens' is 13.19 CVOL.

Field	Value
Net mint amount	996.9 USDC

Step 7- You can view your request under the “Pending Request” tab, however, if you wish to mint or burn CVOL tokens without waiting for the “Receive in” time to elapse, you can click the “Receive Now” button after 15 minutes. An early fulfillment fee will be incurred (expedite fees). However, you won’t be charged the Keepers fee

If the mint is successful, you will be able to view your CVOL tokens in the “balances tab” However, It is possible for the Mint requests to fail due to insufficient liquidity, in such cases, Keepers will constantly try to fulfill the request for one more hour. If unsuccessful, a total refund will be made to the user’s wallet.

Burning CVOL tokens

Step 1- Click the "BURN" tab

Step 2- Select a token(This is the beta version, thus, only CVOL is available), Enter the amount of CVOL you want to burn. n proceed to choose your preferred "Receive in" time.

A screenshot of a dark-themed interface for burning CVOL tokens. At the top, there are two tabs: 'MINT' and 'BURN', with 'BURN' being the active tab. Below the tabs is a 'Select Token' section with a dropdown menu showing 'CVOL' with a blue checkmark icon. Underneath the dropdown, there are two columns of information: 'Platform price' at 75.54 USDC, 'SushiSwap price' at 77.24 USDC (with an external link icon), '1 hour funding fee' at 0.023833%, and 'Collateral ratio' at 60.71% (with a question mark icon). Below this is the 'Enter Amount' section, showing '0.390698' in a text box, a 'Max' button, and a 'CVOL' button. Underneath the text box, it says 'Your available balance: 0.390698 CVOL'. Below that is a 'Receive in' section with a slider ranging from 20 to 60 minutes, with a blue dot at 50 minutes. At the bottom, there are two rows of information: 'Net burn amount' at 0.388162 CVOL and 'Expected number of tokens' at 29.32 USDC. At the very bottom is a large blue button labeled 'APPROVE CVOL' in white capital letters.

Step 3- Click on the “Approve CVOL” button. If this is your first time on the platform you will need to authorize the platform to use CVOL, and proceed to confirm the transaction on Metamask
